

EDRA PRASETIO

Full-Stack Developer | Software Engineer

(236) 882-1713 • edraadrianp@gmail.com • Victoria, BC • github.com/edraprasetio • edraprasetio.github.io/portfolio/

PROFILE

I'm a Software Engineer with around 3 years of experience building web applications using tools like React, TypeScript, Go, and Firebase. I've worked on everything from scalable APIs to secure login systems and real-time features. Strong background in data handling and automated testing using Cypress and Jest through roles at Redbrick, Assembly Digital Media, and as the founder of INSO Systems. I also thrive in cross-functional teams and build impactful tools that make a real difference.

EDUCATION

Bachelor of Software Engineering
University of Victoria

June 2024

TECHNICAL & SOFT SKILLS

- | | | |
|------------|---------------------------|-------------------|
| • AWS | • HTML/CSS | • Creative |
| • Django | • JavaScript / TypeScript | • Detail-Oriented |
| • Firebase | • MongoDB (NoSQL) | • Problem Solver |
| • Go | • MySQL (SQL) | • Team Player |

WORK EXPERIENCE

Software Developer

June 2024 – Present

Self-Employed, Victoria, BC

- Designing and developing a secure messaging web app using React, Go, RSA, JWT, and MongoDB.
- Continuously expanding portfolio with personal projects, demonstrating expertise in modern web technologies.

Software Developer

January 2024 – April 2024

Assembly Digital Media, Victoria, BC

- Developed full-stack applications and implemented bug fixes across 5+ projects using React, TypeScript, and Jest.
- Worked with AWS for cloud deployment and CI/CD pipelines to maintain high-quality releases.
- Designed and maintained regression test suites using Jest, enhancing application stability and security.

Co-Founder and UI & UX Designer

September 2022 – January 2024

INSO Systems, Victoria, BC

- Designed and developed websites for local businesses using React and TypeScript.
- Successfully deployed the websites morganebbett.com and greenspace-designs.web.app.

Full-Stack Developer

May 2022 – August 2022

Redbrick, Victoria, BC

- Developed a carbon calculator web application to promote environmental awareness.
- Built dynamic and responsive user interfaces using React, TypeScript, HTML, and CSS.
- Developed and maintained Scalable RESTful API and back-end services using Django and Python, integrating MySQL databases for efficient data storage and retrieval.

PROJECTS

Secured Messaging App (End-to-End Encrypted)

Stack: React, TypeScript, Go, MongoDB, Docker, JWT, RSA/AES encryption

- Developed a full-stack end-to-end encrypted messaging app with user authentication and secure message delivery.
- Designed and implemented a RESTful API in Go with JWT-based authentication and custom middleware for protected routes.
- Integrated RSA and AES encryption to securely encrypt message content before storage and decrypt it on retrieval.
- Containerized both backend and frontend using Docker for consistent local development and deployment.

JD Movies, Movie Rating Website

Stack: React, JavaScript, Next.js, MySQL, Docker

- Developed a movie website to showcase personalized movie rankings using React and Next.js.
- Implemented bug fixes to the user interface and features.

Capstone Project

Stack: React, TypeScript, Go, MongoDB, Docker

- Developed a scheduler web application with a team of 20 students.
- Led a team of 6 front-end developer students in creating a responsive user interface using React, TypeScript.
- Integrated the user interface to a Go backend API with a different team.

Personal Website

Stack: React, TypeScript, Docker, Github Pages

- Developed a personal website that displays previous work and experience using React.
- Deployed website using Github Pages.
